RADIOLOGY

CT HRCT - Lung

HRCT CHEST

HRCT chest was performed from apices to bases. Slice thickness of 1/ 10mm was obtained on Discovery 750 HD 64 row spectral scanner.

Both lung fields reveal no significant focal pulmonary parenchymal lesion.

The lung parenchyma displays normal attenuation and broncho-vascular markings.

No evidence of lobar collapse/consolidation is seen.

Trachea is in the mid line. Main and segmental bronchi show no abnormality. No e/o bronchiectasis is seen.

The mediastinal structures including the non-opacified aorta and mediastinal vessels are unremarkable.

No evidence of pleural or pericardial effusion is seen.

Impression: No active pulmonary infiltrates.
