COAGULATION

Parameter	Result	Units	Reference Range	Methodology
PT / PT-INR **				
PROTHROMBIN TIME(PT)	14.9	seconds	No reference range	Photo Optical Clot Detection
MEAN NORMAL PROTHROMBIN TIME(MNPT)	12.0	seconds	No reference range	
INR	1.26		No reference range	

INTERPRETATION

Note:
1. INR is the parameter of choice in monitoring adequacy of oral anticoagulant therapy. Appropriate therapeutic range varies with disease and treatment intensity.
2. Prolonged INR suggests potential bleeding disorder/bleeding complications.
3. Result should be clinically correlated.
4. Test conducted on citrated plasma

Recommended therapeutic range for oral anticoagulant therapy
INR 2.0- 3.0 :
·Treatment of venous thrombosis & pulmonary embolism
· Prophylaxis of venous thrombosis(high risk surgery)
· Prevention of systemic embolism in tissue heart valves,AMI, · Bileaflet mechanical valve in aortic position
INR 2.5- 3.5 :
· Mechanical prosthetic valve
· Systemic recurrent emboli

Comments:Prothrombin time measures the extrinsic coagulation pathway which consists of activated factor VII (VIIa), tissue factor and proteins of control pathway (Factor X,V,II & Fibrinogen).This assay is used to control long term oral anticoagulant therapy, evaluation of liver function & to evaluate coagulation disorders specially factors involved in the extrinsic pathway like factors V,VII,X,Prothrombin & fibrinogen
