Ref. No. : GMS/25-26/0146 Dated : 24/03/2026

**Medical Audit Report**

**1. Patient Details**

- **Name**: Rajeev Kakkar
- **Age**: 64 years
- **Sex**: Male
- **Claim Number**: Not Available
- **Policy Number**: H1251082
- **Policy Period**: 22/07/2025 to 21/07/2026

**2. Claim Details**

- **Hospital Name**: ILBS institute of liver & biliary sciences
- **Consultation Date**: 01/03/2026
- **Claimed Illness**: Acute pancreatitis
- **Lab Test:** Available

**3. Summary of Clinical Findings**

| Parameter | Value | Normal Range | Comments |
|---|---|---|---|
| Hemoglobin | 12.4 | | Normal |
| Creatinine | 0.78 | | Normal |

**4. Documentation Gaps in Record**

The patient Mr. Rajeev Kakkar 64 years male was admitted with complaints of abdominal pain one day and fever two days on dated 01/03/2026 and DOD on 14/03/2026 in ILBS.

## 5.Timeline Review

| Date | Event |
|---|---|
| D.O.A – 01/03/2026 | Admitted |
| D.O.D – 14/03/2026 | Discharge from the hospital |

## 6. Observations

The patient Mr. Rajeev Kakkar 64 years male was admitted with complaints of abdominal pain one day and fever two days on dated 01/03/2026 and DOD on 14/03/2026 in ILBS. All investigations are as per SOP. The lipase / amylase ratio is >3. However, the GGT is 36.1 on 09/02/2026 and on 11/02/2026 it is 44.3 which is with in normal limits.

**Q1.** Whether a lipase/amylase ratio >3 is sufficient to conclusively establish alcoholic pancreatitis, or if it is only suggestive in nature?

**Ans. No, it is suggestive in nature. The pancreatitis is likely to be caused by microlith in GB. However, if GGT is increased than alcohol could have been blamed. GGT is the first enzyme of liver which increases first and normalizes lastly after alcohol consumption.**

**Q2.** In the presence of both findings, how should the primary etiology be determined from a clinical standpoint. What is the most probable etiology of pancreatitis in this case based on available evidence?

**Ans. In this case pancreatitis is likely to be caused by microlith in GB and hypercalcemia.**

Ref. No. : GMS/25-26/0146 Dated : 24/03/2026

## 7. Inference

The patient Mr. Rajeev Kakkar 64 years male was admitted with complaints of abdominal pain one day and fever two days on dated 01/03/2026 and DOD on 14/03/2026 in ILBS. Treatment looks to be as per SOP.

## 8. Auditor's Conclusion

The patient Mr. Rajeev Kakkar 64 years male was admitted with diagnosis of acute pancreatitis and treatment given is as per SOP.

## 9. Remarks

This report is based on available documents. We recommend that all future OPD/Hospital admission records should include complete clinical notes to support claim validation. Hospitals and clinics must follow standard documentation practices to avoid ambiguity in insurance claims.
